

What to do if you have a Spill

- ◆ **Do not let the stain set in**

The more time a spill remains on your furniture or carpet, the harder it is to remove. If you don't remove it in time, it may become permanent.

- ◆ **Pick up as much of the spill as possible**

Remember to always blot the spill from the edge to the center. Do not scrub or smear it.

- ◆ **Use only warm, clean water**

Using warm, clean water and a wet/dry vacuum pick up as much of the stain as possible. **NEVER** use all-purpose spray cleaners, bleach or alkaline detergents. Even some common household carpet cleaners and fresheners do more harm than good.

- ◆ **If you cannot remove the stain - Call me!**

What to do in case of Emergency

Immediate response is critical if a water pipe bursts, a sink overflows or a sewer backs up. The source of the damage must be eliminated and a professional extraction should begin immediately to prevent health hazards and reduce further damage to your home and property. Hazardous mold can start to grow in as little as 48 hours!

**If you have an Emergency, I am on call
24 hours a day, 7 days a week!**
